

Luer Lok Adaptor

CLT Adaptor

The adaptor development allows generic syringes and dispensers to take advantage of the advantages of ceramic nozzles. This is a reusable high quality stainless steel adaptor with a softer aluminum cap. It is designed to mount a ceramic nozzle with no tools. If over torqued, the aluminum cap will give away saving the more expensive machined piece. The cap can be replaced at a lower cost. The bore is straight through making cleaning fast and easy.

This adaptor allows for most dispensing operations to purchase a dispensing nozzle that lasts 10 times longer than those in common use.

This device is *tiny*, so Z offsets, and other physical constraints are minimized.
